

A premium finance company uses ARKAD to routinely audit its Active Directory environment

The Background

The customer had an Active Directory configuration which was a child domain of their parent company. The customer was particularly interested to regularly audit their Users and Groups in their AD as part of their audit compliance requirement.

ARKAD provides an exhaustive set of reports on the attributes of User & Group objects such as User's last logon details, the active/disabled/locked out status on user accounts, the recently created/modified/deleted users' information, details on the password expiry, account expiry etc. in its Active Directory environment.

ARKAD provides Group membership reports including nested groups, direct and indirect impact of the Security Groups membership, statistics and summary reports of Groups and their membership.

Also, tracking information on the security aspects of both Users & Groups were important to meet the needs of audit procedures. ARKAD provides several reports to assist in Security Audit.

The customer was in search of an automated reporting solution for Active Directory and narrowed down their search to Vyapin's ARKAD (Admin Report Kit for Active Directory) which could generate the required reports in a customized format.

ARKAD Solution Advantage

- ✓ The customer deployed ARKAD to generate reports on Users/Groups in their Active Directory environment.
- ✓ Exhaustive set of reports to assist in audit compliance
- ✓ Fully automated solution to generate reports at scheduled intervals
- ✓ Reports that exclusively address the needs of Security audit
