

# A medical R&D organization finds DockIT the best choice during migration crunch time

## *The Background*

Our client, a medical research organization, was in urgent need of an inexpensive tool to help them upload vital medical data to their SharePoint database. The small volume of data was located in a single hard drive and the firm wanted it to be made part of the SharePoint list quickly. This would allow it to share this valuable data across various departments.

The critical requirement was that the data should remain intact during and after the migration. So they expected the migration tool to log every step and provide them with a report of errors, if any.

What was also needed was that the data migration tool, manage troublesome points like – long filenames, illegal characters and renaming, automatically, requiring little inputs from the user.

Another important criterion was that the tool should be inexpensive as the client is a small organization involved in medical research.

## *DockIT Solution Advantage*

- ✓ **DockIT** proved to be the right choice to help the organization upload the data from the source computer to its SharePoint database.
- ✓ The report generation feature in **DockIT** provided the client with the necessary information to help ascertain the quality of migration. This feature was utilized effectively by the client and was well appreciated.
- ✓ **DockIT** was also able to automatically handle the common problem of lengthy source filename with little inputs from the user. A few more bits of information and it comfortably sorted the issue of presence of illegal characters in the filenames as well. Incidentally, this feature has been much appreciated by several of our clients.
- ✓ Any doubts raised by the client were promptly answered to and resolved in quick time.
- ✓ Our client found **DockIT** to be the only cost effective tool which could deliver on all its requirements.

## *Know Our Customer*

**Our client is an organization involved in the field of medical research and the development of recuperative drugs used during therapy. It provides vital assistance to pharmaceutical companies that produce medicines for use by patients suffering from life threatening diseases.**

## *The Situation*

**The organization had received some vital medical data which was stored in one of their computers. This data was small in size but the organization wanted it to be made part of its online business productivity network quickly. This data was to be uploaded into its SharePoint database so that it could be used by various departments. Since the volume of data was small; and it being a research organization; the client found it uneconomical to seek the services of large data migration firms. It needed a tool which could quickly complete the task. After a brief search, administrators found that DockIT was the only tool capable of satisfying all their needs.**

## ***The Package***

DockIT supports Microsoft SharePoint Server 2010 / Microsoft SharePoint Foundation 2010 and Microsoft Office SharePoint Server 2007 (MOSS 2007) / Microsoft Windows SharePoint Services v3.0 (WSS 3.0) environments.
