

Admin Report Kit for Windows Enterprise

Reporting tool for Microsoft Windows Enterprise

Product Overview

Admin Report Kit for Windows Enterprise (ARKWE) is a powerful reporting tool for the Microsoft Enterprise Network. ARKWE collects configuration information about Windows domains & servers, users/groups policies, events, services, installed applications, shares, printers, data sources etc. and reports them in a simple format for System Administrators and IT Infrastructure Managers.

ARKWE supports current versions of Microsoft Windows Server (NT/2000/2003) and localized versions of Windows Server, including German, Spanish and French.

Key Features

Domain Reports

- View all domains across the enterprise, their associated servers and trust relationships across domains.
- Scan an entire domain or only a subset of the domain and generate Summary reports on OS version, Service pack, Hardware configuration, Network configuration, Shares and Installed Applications for all computers in the domain.

Export Reports using the Power Export Wizard

Flexible Export feature to export reports from ARKWE to MS-Access database / XML / HTML / Comma Separated Values (CSV) file format. Data Exportable into MS-Access database for archival purposes. Reports may be scheduled for export at different intervals of time – daily, monthly, weekly etc. Ability to export reports across domains and servers in a single task in three simple steps –

- a) Select the Reports
- b) Select domains and computers to generate the reports on and
- c) Schedule the Export.

"Both (ARK and ASM) seem to be working fine. I am very happy with ARK. I have used it for several administration functions, including reviewing our user list and groups."

Senior Network Administrator, S & R Equipment Co., Inc.

"I think that the Admin Report Kit is a great utility for NT administration. As an administrator, I have to generate reports on NT user and group accounts and provide information on resources within our multi-domain environment. The Admin Report Kit generates the information I need very quickly and in a well-organized format. The product is very easy to use, I give this a definite two thumbs!!"

Amtrak, USA

Preview and Print Report

Flexible print preview and print options to print the reports from ARKWE to any local / network printer.

Manage Favorite servers

Windows Servers that need special attention can be tracked using "My Favorites" tool

Filter and Customize data

Powerful Filter and Customize options to track and report only the desired information across different logical entities.

Multiple report formats

Reports can be generated in MDB/CSV/HTML/XML formats or directed to a printer in simple columnar text format.

Benefits

- No agent installation. Information is collected, processed and displayed on the same machine where ARKWE is installed.
- View information about different machines and domains in their own display windows. Ability to restrict the scope of a domain search by allowing the user to select and scan only a subset of computers in the domain. Especially useful for medium to large enterprise networks.
- Organize and group information conveniently into separate Tab Views. The relevance has been maintained according to Windows system information architecture.
- Filter unwanted fields and select the desired fields to view.
- Apply powerful conditional queries to get a narrow subset of information.
- Built-in Reports that allow users to quickly select and generate reports based on some of the common tasks in Systems management reporting.

System Requirements

For the computer running ARKWE

Hardware: Intel Pentium III or higher processor, 128MB of RAM, 15 MB disk

Operating System:

Windows NT 4.0 (SP 6.0) /
Windows 2000 (SP 4.0) /
Windows XP (SP 2.0) /
Windows 2003

Microsoft Data Access
Components (MDAC)
v2.5/2.6/2.8 only

For the computers reported by ARKWE

Windows NT 4.0/ Windows
2000/ Windows XP/
Windows 2003 with
Microsoft Remote Registry
Service enabled.
