

SPList Export for SharePoint 2010

Export tool for Microsoft SharePoint

Product Overview

SPList Export for SharePoint 2010 (SPListX) is a powerful application to export document / picture library contents and associated metadata and list items, including associated file attachments to the Windows File System.

SPListX software exports SharePoint libraries, folders, documents, list items, version histories and metadata to the desired destination folder location in the File System.

SPListX supports all versions of SharePoint 2010 / 2007 / 2003 in a single product. SPListX works with Microsoft SharePoint Server 2010, Microsoft SharePoint Foundation 2010, Microsoft Office SharePoint Server 2007, Windows SharePoint Services 3.0, Microsoft SharePoint Portal Server 2003, and Windows SharePoint Services 2.0 environments.

Benefits

- Simple solution to export folders / documents along with their associated metadata SharePoint libraries and list items along with their file attachments from SharePoint lists such as Tasks, Calendar, Contacts, Survey, Discussion Boards, Announcements, Links, Issue Tracking and Custom Lists.
- Export from multiple SharePoint lists to file server / network shares / local computer.
- Export SharePoint lists to the file system to re-import contents to another application or offline collaboration or backup & restore purposes.
- Export list metadata for easy viewing, re-import metadata to another DMS/ECM or perform an in-depth analysis of metadata in MS-Excel.
- Maintain source folder structure and version history when exporting data from the SharePoint list.
- Propagate original Created Date & Last Modified Date in SharePoint to the Windows File System fields for each folder / document.

System Requirements

Hardware: Intel Pentium processor, 512 MB of RAM, 4 MB disk space to install SPListX.

Software: Windows 7 / Vista / XP (or) Windows Server 2008 / 2003 with the latest service packs and .NET Framework 2.0 or higher.

- Export list items / documents / pictures based on user-defined data filter conditions (constructed based on SharePoint columns).
- Automate export tasks through command-line or Windows Task Scheduler interface.

Key Features

Export folders, documents and metadata

Export folders and files along with metadata and list items including file attachments from multiple SharePoint lists to Windows File System in a single export task. The user can export granular-level folders/files/list data using the SPListX Explorer interface, which displays the contents in a standard tree view or List View mode.

Export SharePoint lists using a batch descriptor file

Export folders / documents along with metadata and list items including file attachments from multiple SharePoint lists to the Windows File System in a single export task. The user can export list contents in bulk using a simple batch descriptor file.

Export SharePoint lists using the search option

Export folders, files and list items including file attachments and associated metadata based on SharePoint search results at the site collection or entire farm level using the standard keywords or advanced search technique.

Tasks Manager

SPListX creates export tasks and maintains task history in a task-oriented interface. Create a scheduled task or save the task settings and manually run the task on-demand. Keep track of all export tasks performed using SPListX. Task Manager internally uses the familiar Windows Task Scheduler to run export tasks at different time intervals - daily, monthly, weekly etc.

Automate Tasks

Run export tasks from the command line (DOS prompt) or invoke export tasks from a batch file or run a scheduled task using the Windows Task Scheduler interface.

Export SharePoint metadata

Exports all SharePoint metadata (column values) available in the SharePoint list, including system columns such as Created, Modified, Approval Status, etc. SPListX exports metadata in Extensible Markup Language (XML), Comma Separated Values (CSV), Microsoft Excel (XLS), and Microsoft Access (MDB) file formats.

Export document versions

SPListX exports multiple document versions (version history) residing in the source SharePoint library. SPListX exports document version history to well organized user-defined version folders in the destination location. SPListX stores the SharePoint list data version history in the metadata file in Windows File System. The list items' file attachments can also be exported to the desired folder location in the Windows File System.

Propagate folder / document system dates

Propagate the system date fields - Created Date and Last Modified Date to the respective folders and documents in the Windows File System (NTFS).
