

XPlica for SharePoint

Export tool for Microsoft SharePoint

Product Overview

XPlica for SharePoint 2003 is a powerful tool to export document / picture library with its contents to another document / picture library or file system. XPlica exports SharePoint libraries, folders, documents, version histories and metadata to the desired destination. XPlica supports both,

SharePoint Portal Server 2003 and Windows SharePoint Services v2.0 environment.

Benefits

- Export SharePoint files for online / offline viewing or backup / restore purposes
- Selectively export folders, documents, versions and metadata
- Sync documents between document / picture libraries without the need to backup and restore items
- Preserve the source folder structure
- Export each version of the document into a manageable folder structure in the file system
- Export metadata into Comma Separated Values (CSV), MS-Excel (XLS), MS-Access (MDB) format for easy viewing, re-import to another DMS or in-depth analysis
- Schedule the export tasks to run at off-peak hours

Key Features

Export to a Document/Picture Library:

- Selectively exports a document/picture library with its contents, namely, folders & files to another library residing in the same or different site
- Easy to use wizard and file explorer like user interface to add contents to the destination library
- Preserves the source folder structure as in source
- Exports previous version of files along with the history information or the most recent version only
- Updates matching column values automatically, if the data types match
- Exports original file created date and last modified date fields
- Overwrites or creates a new version of the file it already exists in the destination library
- Schedule export process to run at specified intervals using built-in task scheduler interface

XPlica utility just saved me and my company several hours of manual work and numerous dollars. Great product.

-- Michael K. Garza, Phelps Dodge Mining Co.- El Paso

I brought this program (XPlica) to help get myself out of some heavy corruption issues. It did what I wanted it to do and was a good 'Version 1' product.

Then I started talking to support about what I would like it to do. Within weeks out came v3.0 and we where doing even better.

Now, after a few weeks of 'friendly user testing' we have again achieved some features that we felt were important.

What more could I want, a good product, with good support and a caring, sharing development team.

-Christopher Grace, De Beers Australia Exploration Limited, Australia

Export to File System:

- Selectively exports a document/picture library and its contents, namely, folders & files to a file system location (local or network drive)
- Easy to use Export Wizard
- Preserves the source folder structure as in source
- Exports all versions of a file or version range or the most recent version into the respective version folders
- Creates metadata file for the files (including versions) exported and stores it in CSV / Excel / MDB format
- Option to specify the SharePoint Library Columns (both system-based and custom) to be exported to the metadata file
- Exports original file created date and last modified date fields to the file system
- Schedule export process to run at specified intervals using built-in task scheduler interface
