

XPlica for SharePoint 2007

Migration tool for Microsoft SharePoint

Product Overview

XPlica for SharePoint 2007 allows you to copy SharePoint lists across your SharePoint farms. XPlica enables you to migrate documents, document properties, list items and associated metadata from one SharePoint list to another. XPlica migrates SharePoint lists (including document & picture libraries), list items, folders, documents, version histories and metadata to the desired destination server. XPlica supports both SharePoint 2003 and SharePoint 2007 versions.

Benefits

The benefits of using XPlica for SharePoint 2007 include:

- Selectively migrate SharePoint list contents to another SharePoint list residing in the **same or different SharePoint server**
- Migrates contents from SharePoint 2003 (SPS and WSS 2.0) to SharePoint 2007 (MOSS 2007 and WSS 3.0)
- Selectively migrate folders, documents, document versions and metadata
- Sync documents between SharePoint lists without the need to backup and restore items
- Preserves the source library structure or re-structure contents during migration
- Migrates document / item versions along with the history information or the most recent version
- Updates matching SharePoint column values automatically
- Associates new metadata stored in an external reference file (CSV / Excel / TXT format) to the respective documents / list items in SharePoint
- Retain the original Created Date, Last Modified Date, Created By, Modified By, Content types and Content Approval fields in the equivalent system fields in the destination list
- Run migrations task through command-line or Windows Task Scheduler interface

- Schedule migration process to run at specified intervals using built-in task scheduler interface

Key Features

Migration Paths

XPlica supports the following content migration paths:

Migration Paths

XPlica supports the following content migration paths:

Source SharePoint Library	Destination SharePoint Library
<ul style="list-style-type: none"> ▪ SharePoint Portal Server 2003 ▪ Windows SharePoint Services v2.0 ▪ Microsoft Office SharePoint Server 2007 ▪ Windows SharePoint Services v3.0 	<ul style="list-style-type: none"> ▪ Microsoft Office SharePoint Server 2007 ▪ Windows SharePoint Services v3.0

Migrate folders, list items, & files and metadata

Migrates folders, list items, and documents along with metadata to another SharePoint list based on the contents selected by the user using XPlica's explorer like interface.

Migrate documents using a batch descriptor file

Migrates folders, list items, and documents along with metadata to another SharePoint list based on the sequential entries in the batch descriptor file.

Update document metadata using external metadata reference file

Associates new metadata values, including document name, custom column values etc. for each document or list item version, using the values specified in the metadata reference file. This feature is extremely useful for metadata cleansing before migrating the list contents to the new location.

Retain original metadata

XPlica propagates the original metadata of documents and list items, including Created Date, Last Modified Date, Created By (Author), Modified By (Editor), Content Approval Status & Approval Comments fields and assigns it to the respective system columns in the new SharePoint list. This feature is extremely useful if you like to store the original metadata values in the respective SharePoint columns.

Migrate versions

XPlica migrates all versions (version history) or user specified document / list item versions along with its corresponding metadata to the destination SharePoint list.

System Requirements

XPlica for SharePoint 2007 application

Windows 7 / Vista / XP (or) Windows Server 2008 / 2003 with the latest service packs and .NET Framework 2.0 or higher

Microsoft Office 2007 Suite or Microsoft Office 2007 Compatibility Pack (required when importing Office 2007 format based file properties)

XPlica Web Services component

XPlica Web Service component enables you to carry forward the Created Date, Last Modified Date, Created By, Modified By, Content Approval, Target Audience and Business Data Column (BDC) values of folders / files / list items during migration.

Tasks Manager

XPlica creates migration tasks and maintains task history in a task oriented interface. Create a scheduled task or store the task settings and manually run the task on-demand. Keep track of all migration tasks performed using XPlica. Task Manager internally uses the familiar Windows Task Scheduler to run migration tasks at different time intervals - daily, monthly, weekly etc.

Automate Tasks

Run migration tasks from the command line (DOS prompt) or automate to run in a scheduled manner using the Windows Task Scheduler interface.

Installation Instructions

Once you download the software, install application packages (.msi) depending on your migration requirements. The simple setup wizard will guide you through the installation process.

- **XPlica2007.msi** in order to install XPlica for SharePoint 2007 application. You can use this setup file to install XPlica application in the SharePoint Server or any client machine running Windows XP or Windows Vista (32-bit or 64-bit platforms).
- **XPlica2007_WebServices_x86.msi** in order to install XPlica Web Services component for 32-bit Windows 2003 Server. You can use this setup file to install XPlica Web Services component in 32-bit Windows Server 2003 running Microsoft Office SharePoint Server 2007 or Windows SharePoint Services v3.0, in order to propagate the Created Date, Last Modified Date, Created By, Modified By, Content Approval Status & Comments fields from the source documents.
- **XPlica2007_WebServices_x64.msi** in order to install XPlica Web Services component for 64-bit Windows 2003 Server. You can use this setup file to install XPlica Web Services component in 64-bit Windows Server 2003 running Microsoft Office SharePoint Server 2007 or Windows SharePoint Services v3.0, in order to propagate the Created Date, Last Modified Date, Created By, Modified By, Content Approval Status & Comments fields from the source documents.
