

# Dockit 365 Archiver

## Release Notes

---

### Version 1.0.6387

- Introduced a separate page for Post Archive actions to handle in detail.
- Modified **Delete all items in source after archive job is complete** post archive action to delete all files permanently instead of moving into the Recycle Bin.
- Included the following changes to the archive conditions:
  - **Files inactive since / older than** - Archive files whose latest version is older than the given date, by including all of their versions.
  - **Files modified between** - Archive files whose modified date of latest version falls between the given from date and to date, by including all of their versions.
  - **Files more than this size** - Archives files whose size of latest version is greater in size than the given value, by including all of their versions. (For all the above three conditions, previously, it will check the modified date for all versions of the files and exports only those matching file versions.)
  - **Libraries inactive since / older than** - Archive SharePoint Libraries that are modified between the given from date and to date.
- Fixed to let the running archiver job as is when reopening the application.

### Version 1.0.6349

- New version release.
