

NTFS Security Auditor

Release Notes

Version 4.1.0

- Performance improvement in all reports available in **Power Search** and **Built-in Reports -> Permissions** feature.

Version 4.0.0

- User Interface enhancements in configuring shares and folders, user/group accounts while reporting shared folder permissions.
- Moved Computer Enumeration section from Configuration Settings dialog to individual shared folder enumeration screen.
- Included **List of folders that have different permissions from parent folder** report in Security Vulnerabilities feature.
- Facilitates scheduling Security Vulnerabilities reports in Power Export Feature.
- Provision to enumerate shares at run time by using **Select shares from server** option that accepts servers as input.
- Enhanced status update while enumerating sub folder permissions, group members, member of information.

- Provision to exclude CREATOR OWNER and Everyone accounts from reporting in Built-In Reports and Power Export features.
- Shares, Folders and Files feature is no longer supported.
- Renamed the following features:
 - **Shares and Resources** to **Shares** in Built-in Reports feature.
 - **Customize** to **Add/Remove columns:** in Built-in Reports and Power Search features.
 - **Customize** to **Customize reports...** in Power Export Built-in Reports wizard.
 - **Domain Credentials** to **Domain/Server Credentials** in the Configuration Settings dialog.

Version 3.2.5

- Fixed the **Timeout expired** issue that occurred while using SQL database option in the application.

Version 3.2.4

- Included new **File and Folder Ownership** report in **Built-in Reports** feature that displays the owner for files and folders and sub-folders of a share.
- Reports the member of information for the trusted domain ACEs present in the shared folder/files in the Built-in Reports feature.
- Fixed to support certain special characters in folder and file names in export files.
- Users can request a permanent license key by filling a form within the application.

Version 3.2.3

- New 'Exceptions (DAACL)' reports under Power Search feature - Reports ACLs of folder(s) or file(s) that do not have a set of permissions or accounts in them.
- Provision to generate reports for all users and groups by way of 'User' and 'Group' account types in 'Permissions (DAACL)' in Power Search feature.
- Provision to customize report data in Power Search Reports.
- Provision to include specific levels of sub folder(s) in Security Vulnerabilities Reports.
- Enhanced UI to view Domain Controllers, Servers and Workstations separately in Entire Domain Option.

- Provision to exclude specific accounts and account categories such as Unknown Accounts, Expired Accounts and Disabled Accounts in permissions reports.
- 'Standard Reports' feature rechristened as 'Shares, Folder and Files'.
- 'Domain Reports' in 'Standard Reports' feature is discontinued.
- Additional 'Full Path' column to view the complete folder hierarchy path of a given folder.
- Fixed the bug in Exclude Accounts (previously custom accounts are not excluded)

Version 3.2.2

- Security Vulnerabilities – Reports the vulnerabilities in access permissions assigned to users and groups on shared folder(s) or file(s).
- Ability to edit and re-run the Built-in Permissions report at ease.

Version 3.2

- Compare ACLs - Compare all inherited and explicit permissions of two shared folders, a shared folder & an exported shared folder permissions snapshot.
- Provision to customize report data in all Built-in Reports.

Version 3.1

- Provision to view all the members of a group which has permission on the selected shared folder(s)/file(s) and their sub-group members at all group levels in Built-in Reports.
- Provision to exclude inherited permissions and specified accounts from reporting in Built-in Reports.
- Filter option included to filter report data in Built-in reports.

Version 3.0.1

- Automatically loads Basic Account permissions for the first assigned account in Shared folder or Directory or File in the Security Viewer.

Version 3.0

- Security Viewer - Easy to use single UI to view entire file system permissions.
- DAC Reports for Central Access Policy and Central Access Rule in Windows Server 2012.

Version 2.4

- Provision to view Account status such as Unknown Accounts, Expired Accounts and Disabled Accounts in permissions reports.
- Provision to highlighting permissions and Account status in permissions reports.
- Provision to view nested group members in the 'List of all permissions for folders (Inherited & Explicit)' report.

Version 2.3

- Provision to include error information in permissions reports.
- User Profile Editing in 'User Connection Profiles'.
- Provision for highlighting error information in permissions reports.

Version 2.2

- Provision to validate folder(s) / file(s) path in permissions reports.
- Provision to view the status of schedule tasks in permissions reports.
- Enhanced XLSX export.
