

VM Performance Analyzer

Release Notes

Version 1.0

First version of Performance Analyzer module to analyze all performance metrics of Hyper-V Hosts and their VMs in a Hyper-V environment.

Features included in the base version:

- **Data Collector** - This feature will collect the performance counter information for Hyper-V Hosts and their virtual machines.
- **Live Performance Data** - This feature shows the live performance counter data collection for the currently running Data Collector task.
- **Performance Reports** - This feature provides the summary reports for the Hyper-V Hosts and their virtual machines (configured in Data Collector) for the selected performance counters.
