

Pharmaceutical company's document export with SPListX

The Background

The customer faced a business situation which led to the task of moving the documents from the existing SharePoint environment to another document management system. During this transfer they needed to handle a lot of issues - the most important being the documents' size and volume. During this export their other requirement was saving the original documents for backup and recovery purposes in the event of any system failures.

Various types of export errors were anticipated especially due to the number of documents involved.

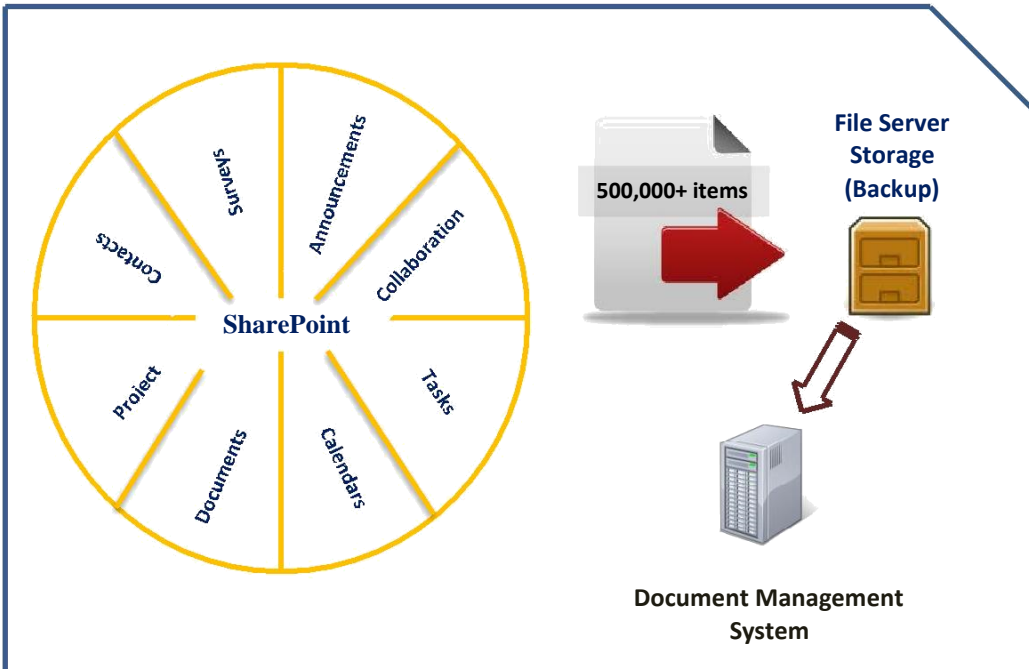

Thus, the customer was seeking a document export solution to move their documents to the new Document Management System and chose Vyapin's SPListX product to first export their documents to the file system and subsequently move the contents to the new DMS.

Know Our Customer

The customer is a Swedish pharmaceutical company

The Situation

Our customer was seeking a solution to control the issues in transporting huge volumes of documents from their existing SharePoint system to another Document Management system. During this migration process, they required a solution to back-up the existing contents in SharePoint to a file server. They were looking for a solution that could transfer a large number of documents to the file system in less time.

SPListX Solution Advantage

- ✓ SPListX transferred huge volumes of documents retaining current folder structures and its substructures.
- ✓ SPListX assisted the customer in conducting a quick transfer of 500,000+ documents to another document management system.
- ✓ SPListX exported the contents and the associated metadata in MS-Excel format (including source date and author details), which turned out to be an extremely useful option for backup and recovery procedures in the event of technical snags.
- ✓ SPListX's ability to archive the documents versions became a very useful feature, while exporting documents that had several versions associated.
- ✓ Activity logs provided a detailed status of the entire export process.
- ✓ SPListX's documents export tasks were scheduled to run at specified time intervals, especially off-peak hours.

The Package

SPListX supports Microsoft SharePoint Server 2010 / Microsoft SharePoint Foundation 2010 and Microsoft Office SharePoint Server 2007 (MOSS 2007) / Microsoft Windows SharePoint Services v3.0 (WSS 3.0) environments.
