

# A leading funds management conglomerate uses DockKIT to migrate its global operations data to SharePoint servers

### *The Background*

Our client had a large volume of data that needed to be migrated from its legacy database into SharePoint. The legacy database's directory tree was to be replicated in its new SharePoint server. A smooth and quick transfer was required to ensure an uninterrupted business flow. During this process, the Metadata was required to be kept intact, while new Metadata was needed to be appended wherever necessary.

The challenge was the size as a large database had to be migrated into SharePoint libraries, along with its Metadata.

While searching for a suitable tool, they found **DockKIT** to be the ideal choice which would ensure a smooth and hassle free migration.

### *DockKIT Solution Advantage*

- ✓ Several thousand gigabytes of data was migrated from the existing database to Microsoft SharePoint 2010
- ✓ The legacy system's metadata too was successfully migrated into and made compatible with SharePoint 2010
- ✓ Wherever necessary, new metadata was created and appended to the documents already migrated to SharePoint 2010
- ✓ To make the migration easy to manage, our client was able to create a customized approach by keying in its requirements in the form of batch files. These proved extremely handy during the operation
- ✓ **DockKIT's** user friendly interface enabled the database administrators to complete the migration task seamlessly
- ✓ Moreover, **DockKIT's** technical team responded rapidly to add certain additional capabilities in the tool as enhancements, upon request, to ensure an error free migration

### *Know our customer*

**Our DockKIT client is a private funds management conglomerate which handles funds and investments from several large corporations with worldwide operations.**

### *The Situation*

**The conglomerate was in search of a suitable data migration tool to enable it to migrate a large volume of data, representing its global operations and stored in legacy systems to their new SharePoint servers. The volume of data was so large that to migrate it flawlessly, was beyond the capabilities of most tools. The directory tree structure in their file servers were required to be reproduced in SharePoint servers. After undertaking an extensive search for a suitable data migration tool, they found DockKIT to be the best solution to fulfill their pressing need.**

## ***The Package***

DockIT supports Microsoft SharePoint Server 2010 / Microsoft SharePoint Foundation 2010 and Microsoft Office SharePoint Server 2007 (MOSS 2007) / Microsoft Windows SharePoint Services v3.0 (WSS 3.0) environments.
