High Speed Bulk Migration Tool for Office 365

[Dokit 365 Migrator](#) is a high speed bulk migration tool exclusively designed for Office 365. Dokit 365 helps to migrate contents from network file shares, file servers and local hard drives to Microsoft Office 365 - SharePoint Online and OneDrive for Business, while preserving file properties and associated metadata. The application has been built from ground-up to cater to the needs of businesses in all sizes, from small to large enterprise.

Highlights of Dokit 365 Migrator

- ✓ Migrate documents from file shares to OneDrive for Business using the exclusive migration job
- ✓ Automatic provisioning of OneDrive sites (personal site)
- ✓ Easily setup a migration job using simple drag-n-drop operations
- ✓ Migrate large volume of contents and properties from network file shares, file servers and local hard drives to Office 365 at high speed
- ✓ Create the source folder structure in SharePoint Online as-is

- ✓ Carry forward important file system properties from file servers / file shares such as Created, Modified, Created By and Modified By to respective SharePoint columns for better integrity
- ✓ Extract document's native properties - no matter whether it is Office file, PDF or image files and apply them to SharePoint columns
- ✓ Ability to map folder & file metadata to SharePoint built-in or custom columns
- ✓ Convert folders into document sets by simply associating its content type
- ✓ Replace illegal or invalid characters in file and folder names with the valid ones without touching the source
- ✓ Schedule your migration to commence at off-peak time or scheduled intervals
